

## NEIGHBORHOOD ADVISORY

### **AINTREE STORMWATER MANAGEMENT POND - ROUTINE MAINTENANCE NOTICE**

The City of Rockville Department of Public Works will carry out routine maintenance of the Aintree Stormwater Management pond during the week of August 25-29. The pond is located at the cul-de-sac end of Aintree Drive between the road and the stream valley park. The pond, reconstructed in the late 1990s, is due for removal of excess woody vegetation and sediment that have accumulated in the bottom of the pond. This routine maintenance will ensure that the pond continues to effectively catch and clean stormwater before it enters the streams in the Watts Branch Watershed.

A City contractor will use construction equipment to remove the excess plants, trees and sediment. All debris will be hauled away for disposal. The work will change the appearance of the pond. The cleared vegetation will continue to grow over time in the natural cycle of all stormwater management ponds. To further improve the pond, the contractor will also install new wetland plants at the pond's waterline in October or November during the cooler fall planting season.

Construction equipment will arrive on or about Thursday, August 21. Work should be completed within the following week, subject to weather conditions. You can expect truck traffic on Aintree Drive while work is underway and equipment parked on the street and in the park.

We regret any inconvenience this work may cause. If you have any questions or wish to get additional information, please contact:
